

## Elephant Questions

- 1.) Elephants are housed outside when the weather permits, if the elephants need to be inside for the night they each have a stall. Each elephant has their own area at night and are not restrained.
- 2.) The current elephant barn has cement floors which are covered with wood shavings. One of the stalls is covered with rubber flooring to provide cushioning for our 0.1 elephant Irene. The new barn will have sand floors and a cement bath area. All yards have a sand /dirt mixture.
