

*Hmdel*

## Elephant Profile Form

Scientific name: *Elephas maximus*

Common name: Asian Elephant

House name: Mari

Acc #: 821294

Std BK #: 125

Acq Date: 24 July 1982

Sex: Female

Birth Date: 24 Jul 1975

Birth Place: Hyderabad, India

Weight: actual/ est: lbs. 10,200 Lbs

### Transaction History:

Date	Type	From	To
24 Jul 1982	Donation	Hyderabad, India	Honolulu Zoo

### Recurring Medical Problems and Current Physical Condition:

No recurring medical problems, her current physical condition is good

### Socialization, Temperament and Behavior History:

Mari socializes well with our other elephant as well as our handlers. Her temperament is easy going although she may be slow at times to perform behaviors.

### Voice and Ankus Commands, and Chaining Protocol used with this elephant:

Mari responds to from thirty to forty voice commands. A guide is used as a secondary command on specific points of her body. She is chained only during bath, footwork and some medical procedures

### Types of Reinforcement Rewards or Discipline:

What rewards or discipline works best with this elephant?

Mari is given food rewards during and after our morning routines and working behaviors. We also use "good girl" along with a friendly pat.

### Breeding Potential:

Poor, good, excellent, choose one and explain why.

Per Dr. Dennis Schmitts 2005 breeding soundness exam, Mari is cycling normally. She is free of cysts and tumors despite her advanced age. Mari has never calved before.

### Comments and Suggestions:

City/Zoo need to commit to completing the new facility and follow through with breeding the elephants in a timely manner.
